

seminar 15 Nov 2018, JIExpo Kemayoran, Jakarta

“SUSTAINABILITY MYTH or FACT? Using Lifecycle Thinking to create better packaging systems”

Organised by:

**INDONESIAN
PACKAGING
FEDERATION**

member of:

In conjunction with:

Sustainable packaging is the important competitive factor amongst the packaging industries. Every company or individual in the field of the packaging gives top priority to the sustainable packaging development of their services. Sustainable packaging reduces the environmental and ecological impacts thus the most liked and attractive parameter considered by the customers.

Sustainable packaging helps in increasing the quality and viability of the human life and natural ecosystem for a longer period of times.

Packaging industries always strive to improve the standard and quality of their packaging services with limited resources and economic considerations and their focus is only on sustainable packaging.

1. Why should sustainable packaging remain a top priority for businesses today?
2. What sustainability gaps do we face and why?
3. How can tackle sustainability gaps in packaging design and production in the most effective way?
